

# Moving forward - looking ahead - with solutions by SHL AG

SHL AG Newsletter September 2013

Dear Ladies and Gentlemen,

In today's newsletter we would like to inform you about the latest news on **SHL AG**.

Our topics are: **SHL** services „simulation and offline programming“ and **SHL** in action using the example of a plant for the production of door fittings at FSB.

## More efficiency and productivity – by offline simulation and programming:

### We determine:

- feasibility
- room situation
- collision risk
- cycle time

Another way to enhance your productivity is by offline-programming. It can be done parallel to your production!

### The advantages are:

- shortened setup times.
- a higher path accuracy.
- avoid rejects – and improve quality.
- quick adjustments to path and process modifications.

## Perfect robot teamwork – with SHL technology

It starts with notching, followed by matting, then surface grinding and finally stacking:  
A fully integrated robot cell with four units performs the entire handling during the process of machining stainless steel roses.

Thanks to the **SHL** plant, a medium-sized fittings specialist is able to continue producing high quality products in Germany.
